Start of Block: Introduction

Q26 The debate around trophy hunting has intensified over recent years and we believe it is increasingly important to understand how people view trophy hunting, and what shapes their views. This survey is made up of two sections and takes 7 minutes on average. First, we will ask for anonymous information about you (e.g., age, gender, etc.), which will help us better contextualise responses in the second part of the survey. In part two you will be presented with a number of trophy hunting related scenarios and will be asked to score how morally acceptable or otherwise you find each scenario. Ethics: This study is part of a wider research project based at the University of Reading and University of Sheffield. All of the information collected will be held by the University of Reading and University of Sheffield (Data controllers), and by Qualtrics, the online survey platform. Both the Universities and Qualtrics are fully complicit with UK data protection laws. Under data protection law we are required to inform you that this use of the personal data we may hold about you is on the lawful basis of being a public task in the public interest and where it is necessary for scientific or historical research purposes. If you withdraw from a research study, which processes your personal data, dependant on the stage of withdrawal, we may still rely on this lawful basis to continue using your data if your withdrawal would be of significant detriment to the research study aims. We will always have in place appropriate safeguards to protect your personal data. Note: You must be 18 or over to take part in this survey. Your individual responses will be held by the University of Reading and University of Sheffield on a secure drive for the duration of the project. When the research is published, we will release an open-access summarised form of the data. Should you wish to withdraw your answers from this survey at any time prior to the publication of results, please e-mail t.f.johnson@sheffield.ac.uk or lukechristopher.evans@reading.ac.uk. Note: The removal of your data is only possible if you have give us your email address whilst completing the survey. The organisation responsible for protection of your personal information is the University of Reading, the data controller and institution where ethical approval was gained. Queries regarding data protection and your rights should be directed to the University Data Protection Officer at imps@reading.ac.uk, or in writing to: Information Management & Policy Services, University of Reading, Whiteknights, P O Box 217, Reading, RG6 6AH. You have certain rights under data protection law which are: - Withdraw your consent, for example if you opted in to be added to a participant register; - Access your personal data or ask for a copy; - Rectify inaccuracies in personal data that we hold about you; - Be forgotten, that is your details to be removed from systems that we use to process your personal data; - Restrict uses of your data; - Object to uses of your data, for example retention after you have withdrawn from a study. Some restrictions apply to the above rights where data is collected and used for research purposes. You can find out more about your rights on the website of the Information Commissioners Office (ICO) at <https://ico.org.uk>. Please confirm that you consent to take part in this study

End of Block: Introduction

Start of Block: Demographics

Q5 How old are you? Note: You must be 18 or over to take part in this survey

Q7 What gender do you identify as?

☐ Male (1)

☐ Female (2)

☐ Non-binary / third gender (3)

☐ Other (4)

☐ Prefer not to say (5)

Q8 Please select the highest level of education that you have attained?

- ☐ Doctoral degree (1)
 - ☐ Masters degree (2)
 - ☐ Bachelors degree (3)
 - ☐ High school/College or below (4)
 - ☐ Prefer not to say (5)
-

Q9 What country have you spent the most time living in?

Q10 What diet do you most closely align with?

- ☐ Omnivore (Meat, fish, dairy, fruit and vegetables) (1)
 - ☐ Vegetarian (No meat or fish) (2)
 - ☐ Vegan (No meat, fish, or dairy) (3)
 - ☐ Pescatarian (No meat) (4)
 - ☐ Carnivore (Primarily meat) (5)
 - ☐ Other (6)
-

Q179 Have you, or would you ever, engage in trophy hunting given the opportunity?

- ☐ Yes (1)
- ☐ Unsure (2)
- ☐ No (3)
-

Q11 Do you consider yourself an expert on trophy hunting

- ☐ Yes (1)
- ☐ Somewhat (2)
- ☐ No (3)
-

Display this question:

If Q11 = Yes

Or Q11 = Somewhat

Q13 Briefly describe the credentials of your trophy hunting expertise e.g. any research, education or expertise

Q177 We want to know your opinion on trophy hunting. You are now going to be given five trophy hunting scenarios and will be asked to judge their acceptability - e.g. trophy hunting is

acceptable (should be permitted/tolerated under this scenario) or unacceptable (should NOT be permitted/tolerated under this scenario). If you have any existing understanding of trophy hunting evidence, place this to one side during the scenarios, your decision on 'Acceptability' should be judged by weighing information solely from each scenario against your own values and morals. Note: Acceptability does not imply that you would be personally willing to engage in trophy hunting.

Start of Block: Scenario 1

Q36 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from Namibia hunts and kills a Baboon in Namibia. The hunting of this particular animal was likely to negatively affect the conservation status of the local population of Baboons. The revenue from the hunt was shared between the landowner and a hunting tourism company. Hunting revenues at this location do not significantly contribute to maintaining the local habitat for wildlife. The hunter used a high powered rifle, which has a relatively high chance of killing the animal instantly.

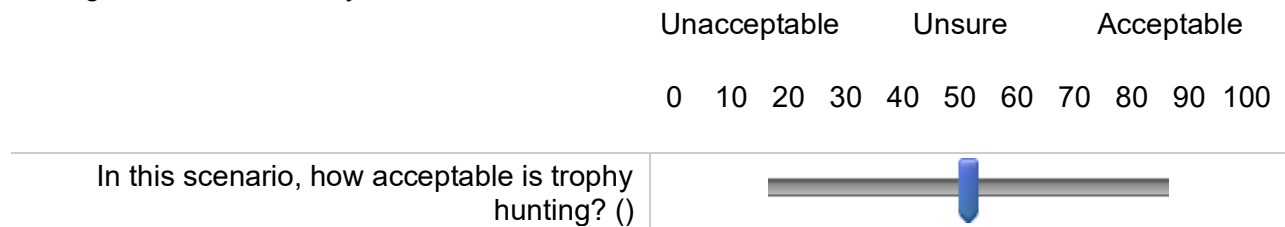

Unacceptable Unsure Acceptable

0 10 20 30 40 50 60 70 80 90 100

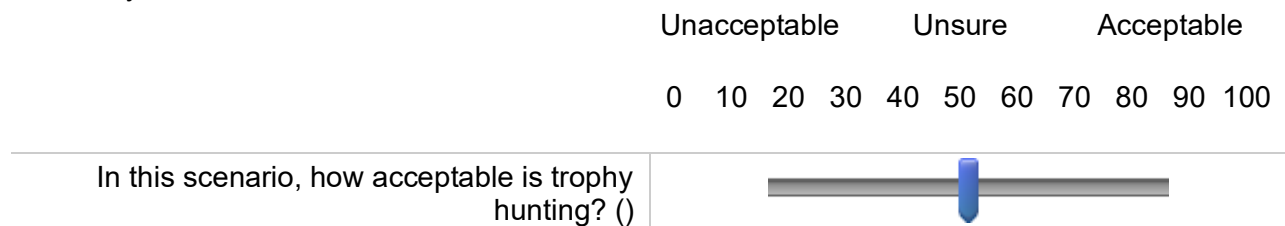

In this scenario, how acceptable is trophy hunting? ()

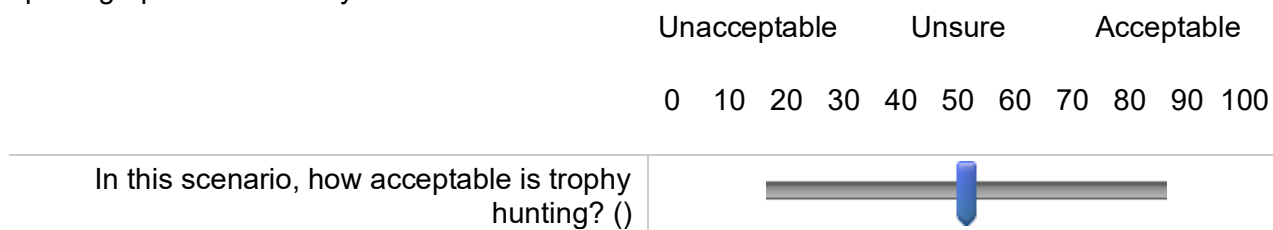

Q14 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from South Africa hunts and kills a Zebra in Zimbabwe. The hunting of this particular animal was unlikely to negatively affect the conservation status of the local population of Zebras. The revenue from the hunt was shared between the landowner and a hunting tourism company. Hunting revenues at this location significantly contribute to maintaining the local habitat for wildlife. The hunter used a high powered rifle, which has a relatively high chance of killing the animal instantly.

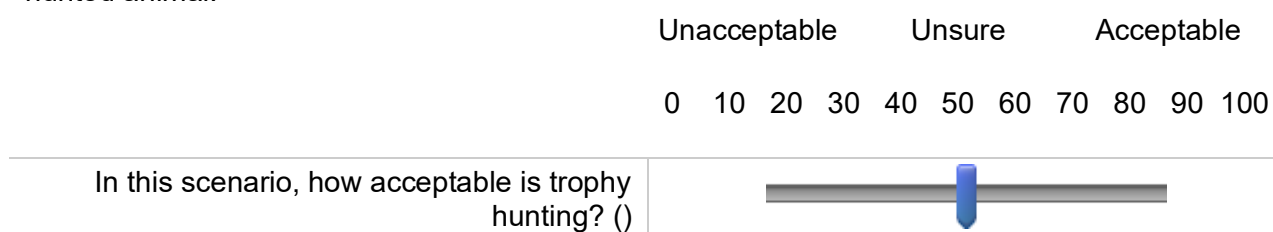

Q15 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from Namibia hunts and kills a Leopard in Zimbabwe. The hunting of this particular animal was unlikely to negatively affect the conservation status of the local population of Leopards. The revenue from the hunt was shared between the landowner, a hunting tourism company, and the local community. Hunting revenues at this location significantly contribute to maintaining the local habitat for wildlife. The hunter used a bow, which has a relatively lower probability of killing the animal instantly. After the hunt, the hunter posed for a photograph with the body of the hunted animal.

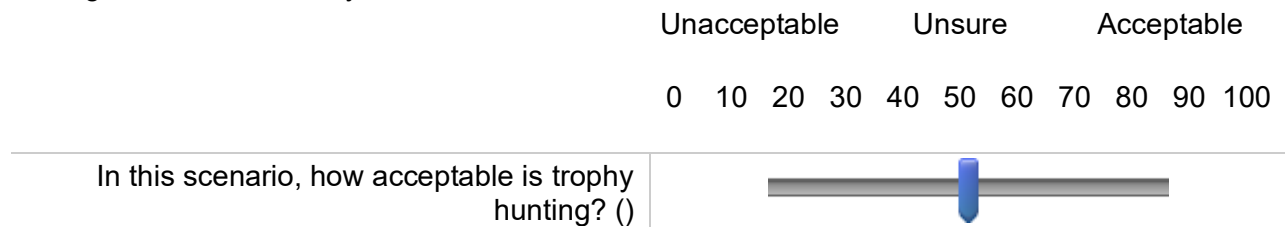

Q16 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from South Africa hunts and kills a Giraffe in Namibia. The hunting of this particular animal was unlikely to negatively affect the conservation status of the local population of Giraffes. The revenue from the hunt was shared between the landowner, a hunting tourism company, and the local community. Hunting revenues at this location do not significantly contribute to maintaining the local habitat for wildlife. The hunter used a bow, which has a relatively lower probability of killing the animal instantly. After the hunt, the hunter posed for a photograph with the body of the hunted animal.

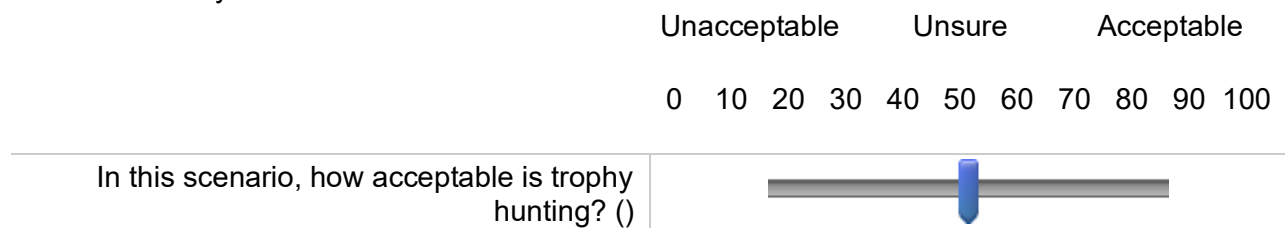

Q17 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from Namibia hunts and kills a Wildebeest in Namibia. The hunting of this particular animal was unlikely to negatively affect the conservation status of the local population of Wildebeests. The revenue from the hunt was shared between the landowner and a hunting tourism company. Hunting revenues at this location significantly contribute to maintaining the local habitat for wildlife. The hunter used a bow, which has a relatively lower probability of killing the animal instantly. After the hunt, the hunter posed for a photograph with the body of the hunted animal.

Q18 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from Botswana hunts and kills a Lion in Mozambique. The hunting of this particular animal was unlikely to negatively affect the conservation status of the local population of Lions. The revenue from the hunt was shared between the landowner, a hunting tourism company, and the local community. Hunting revenues at this location significantly contribute to maintaining the local habitat for wildlife. The hunter used a bow, which has a relatively lower probability of killing the animal instantly.

Q19 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from Namibia hunts and kills an Oryx in Botswana. The hunting of this particular animal was likely to negatively affect the conservation status of the local population of Oryx. The revenue from the hunt was shared between the landowner and a hunting tourism company. Hunting revenues at this location significantly contribute to maintaining the local habitat for wildlife. The hunter used a high powered rifle, which has a relatively high chance of killing the animal instantly.

Q20 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from Namibia hunts and kills a Cheetah in Zimbabwe. The hunting of this particular animal was likely to negatively affect the conservation status of the local population of Cheetahs. The revenue from the hunt was shared between the landowner, a hunting tourism company, and the local community. Hunting revenues at this location do not significantly contribute to maintaining the local habitat for wildlife. The hunter used a high powered rifle, which has a relatively high chance of killing the animal instantly. After the hunt, the hunter posed for a photograph with the body of the hunted animal.

Q90 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from France hunts and kills a Hyena in Mozambique. The hunting of this particular animal was unlikely to negatively affect the conservation status of the local population of Hyenas. The revenue from the hunt was shared between the landowner and a hunting tourism company. Hunting revenues at this location do not significantly contribute to maintaining the local habitat for wildlife. The hunter used a bow, which has a relatively lower probability of killing the animal instantly. After the hunt, the hunter posed for a photograph with the body of the hunted animal.

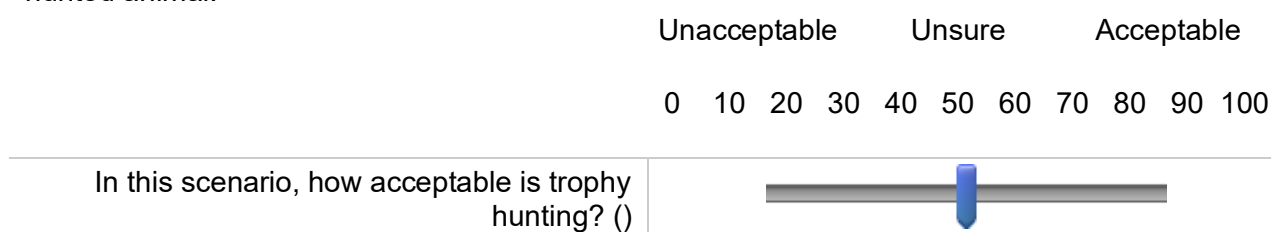

Q91 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from France hunts and kills a Caracal in Zimbabwe. The hunting of this particular animal was likely to negatively affect the conservation status of the local population of Caracals. The revenue from the hunt was shared between the landowner, a hunting tourism company, and the local community. Hunting revenues at this location do not significantly contribute to maintaining the local habitat for wildlife. The hunter used a bow, which has a relatively lower probability of killing the animal instantly.

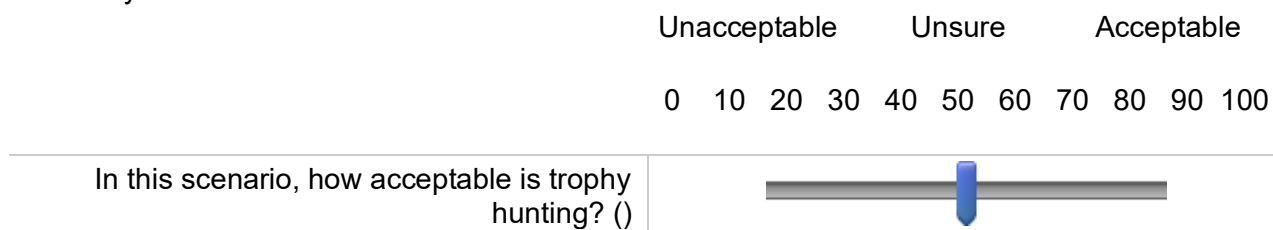

Q92 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from Portugal hunts and kills a Rhino in South Africa. The hunting of this particular animal was likely to negatively affect the conservation status of the local population of Rhinos. The revenue from the hunt was shared between the landowner, a hunting tourism company, and the local community. Hunting revenues at this location do not significantly contribute to maintaining the local habitat for wildlife. The hunter used a bow, which has a relatively lower probability of killing the animal instantly. After the hunt, the hunter posed for a photograph with the body of the hunted animal.

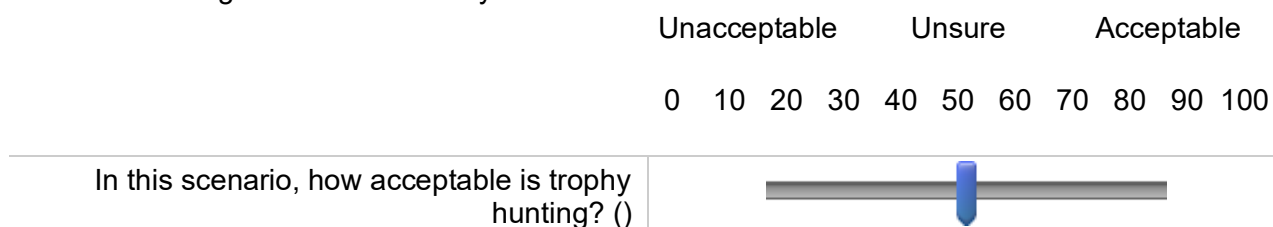

Q93 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from Spain hunts and kills a Hyena in Zimbabwe. The hunting of this particular animal was unlikely to negatively affect the conservation status of the local population of Hyenas. The revenue from the hunt was shared between the landowner and a hunting tourism company. Hunting revenues at this location do not significantly contribute to maintaining the local habitat for wildlife. The hunter used a high powered rifle, which has a relatively high chance of killing the animal instantly. After the hunt, the hunter posed for a photograph with the body of the hunted animal.

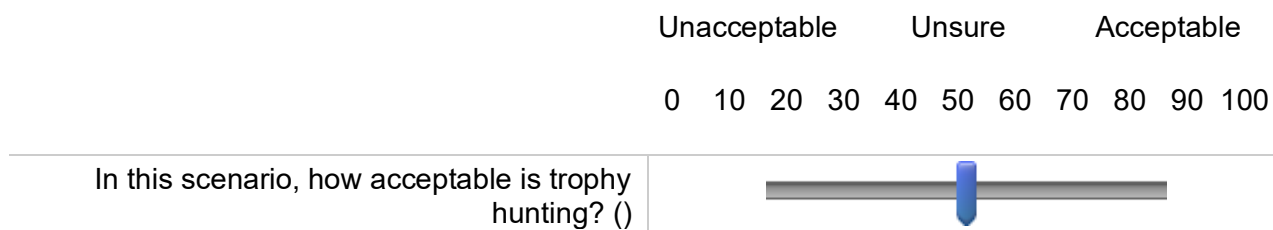

Q94 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from Portugal hunts and kills a Leopard in Mozambique. The hunting of this particular animal was unlikely to negatively affect the conservation status of the local population of Leopards. The revenue from the hunt was shared between the landowner, a hunting tourism company, and the local community. Hunting revenues at this location significantly contribute to maintaining the local habitat for wildlife. The hunter used a bow, which has a relatively lower probability of killing the animal instantly. After the hunt, the hunter posed for a photograph with the body of the hunted animal.

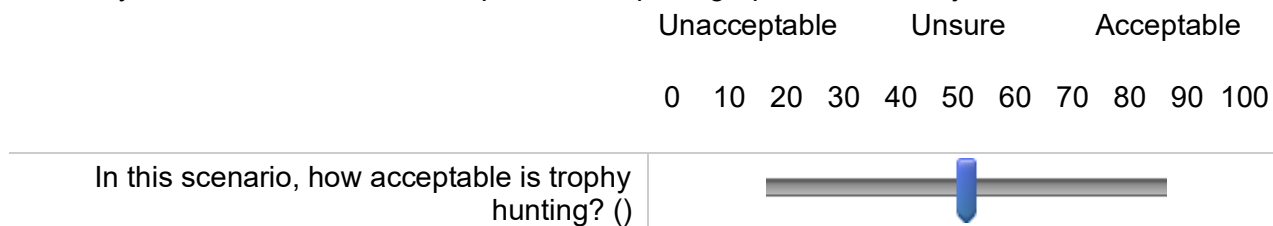

Q95 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from Spain hunts and kills a Lion in Mozambique. The hunting of this particular animal was likely to negatively affect the conservation status of the local population of Lions. The revenue from the hunt was shared between the landowner, a hunting tourism company, and the local community. Hunting revenues at this location significantly contribute to maintaining the local habitat for wildlife. The hunter used a high powered rifle, which has a relatively high chance of killing the animal instantly.

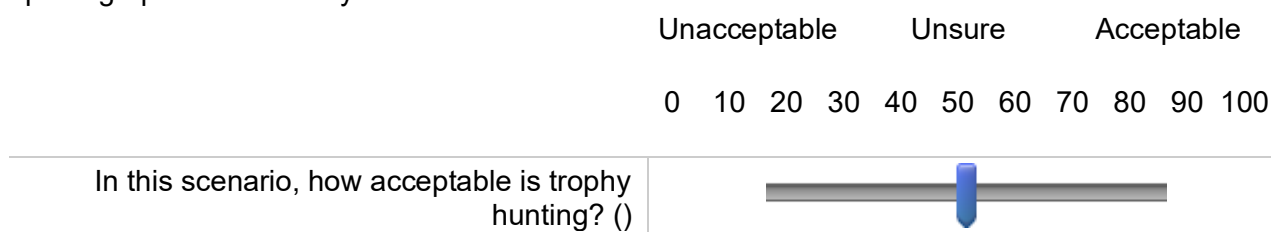

Q96 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from Italy hunts and kills a Caracal in Zimbabwe. The hunting of this particular animal was unlikely to negatively affect the conservation status of the local population of Caracals. The revenue from the hunt was shared between the landowner and a hunting tourism company. Hunting revenues at this location significantly contribute to maintaining the local habitat for wildlife. The hunter used a high powered rifle, which has a relatively high chance of killing the animal instantly. After the hunt, the hunter posed for a photograph with the body of the hunted animal.

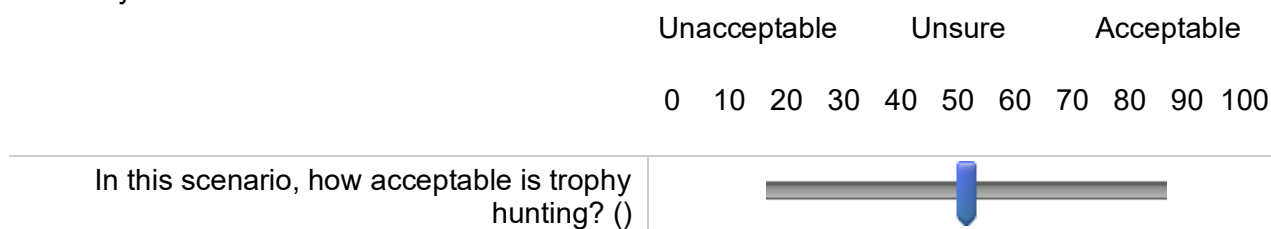

Q97 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from Portugal hunts and kills an Oryx in Namibia. The hunting of this particular animal was likely to negatively affect the conservation status of the local population of Oryx. The revenue from the hunt was shared between the landowner and a hunting tourism company. Hunting revenues at this location do not significantly contribute to maintaining the local habitat for wildlife. The hunter used a bow, which has a relatively lower probability of killing the animal instantly. After the hunt, the hunter posed for a photograph with the body of the hunted animal.

Q98 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from Spain hunts and kills a Elephant in Mozambique. The hunting of this particular animal was unlikely to negatively affect the conservation status of the local population of Elephants. The revenue from the hunt was shared between the landowner, a hunting tourism company, and the local community. Hunting revenues at this location significantly contribute to maintaining the local habitat for wildlife. The hunter used a high powered rifle, which has a relatively high chance of killing the animal instantly. After the hunt, the hunter posed for a photograph with the body of the hunted animal.

Q99 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from Spain hunts and kills a Buffalo in South Africa. The hunting of this particular animal was likely to negatively affect the conservation status of the local population of Buffalos. The revenue from the hunt was shared between the landowner and a hunting tourism company. Hunting revenues at this location do not significantly contribute to maintaining the local habitat for wildlife. The hunter used a bow, which has a relatively lower probability of killing the animal instantly.

Q100 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from France hunts and kills a Giraffe in Zimbabwe. The hunting of this particular animal was likely to negatively affect the conservation status of the local population of Giraffes. The revenue from the hunt was shared between the landowner and a hunting tourism company. Hunting revenues at this location do not significantly contribute to maintaining the local habitat for wildlife. The hunter used a high powered rifle, which has a relatively high chance of killing the animal instantly.

The hunting of this particular animal was unlikely to negatively affect the conservation status of the local population of Whitetail deer. The revenue from the hunt was shared between the landowner, a hunting tourism company, and the local community. Hunting revenues at this location do not significantly contribute to maintaining the local habitat for wildlife. The hunter used a bow, which has a relatively lower probability of killing the animal instantly.

In this scenario, how acceptable is trophy hunting? ()

Q201 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from the USA hunts and kills a Grizzly bear in the USA. The hunting of this particular

animal was likely to negatively affect the conservation status of the local population of Grizzly bears. The revenue from the hunt was shared between the landowner, a hunting tourism company, and the local community. Hunting revenues at this location significantly contribute to maintaining the local habitat for wildlife. The hunter used a bow, which has a relatively lower probability of killing the animal instantly. After the hunt, the hunter posed for a photograph with the body of the hunted animal.

Q202 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from the USA hunts and kills a Moose in the USA. The hunting of this particular animal was unlikely to negatively affect the conservation status of the local population of Moose. The revenue from the hunt was shared between the landowner, a hunting tourism company, and the local community. Hunting revenues at this location significantly contribute to maintaining the local habitat for wildlife. The hunter used a high powered rifle, which has a relatively high chance of killing the animal instantly. After the hunt, the hunter posed for a photograph with the body of the hunted animal.

Q203 Please consider the following trophy hunting scenario and rate its acceptability: A trophy hunter from Canada hunts and kills a Mountain lion in Canada. The hunting of this particular animal was unlikely to negatively affect the conservation status of the local population of Mountain lions. The revenue from the hunt was shared between the landowner and a hunting tourism company. Hunting revenues at this location do not significantly contribute to maintaining the local habitat for wildlife. The hunter used a high powered rifle, which has a relatively high chance of killing the animal instantly. After the hunt, the hunter posed for a photograph with the body of the hunted animal.
